

Pinlock for Acerbis helmet visor

Pinlock 70 increases the resistance to fogging of the visor, helping riders to see better in difficult weather conditions.

It installs between two pre-prepared retaining pins on the inside of the plexi. Thanks to this film and its silicone seal, moisture from exhaled air does not get between the aforementioned layers, so there is nothing to condense in contact with the cold Plexiglas on the outside.

The liner is made of a moisture absorbing plastic and therefore the surface is essentially dry when in use. This airtight pocket ensures that the temperature difference is significantly reduced. The Pinlock liner absorbs moisture from the inside and offers you uninterrupted clear visibility.

Environmentally dispose of the product at the end of its life.
